VIKING BY DYNAMIC
BLACK LINER

Mixture for use in tattooing.

Color Composition: Water, Glycerin, CI 77266, Witch Hazel Water, Butylene Glycol.

Safety instructions for use: Preferably for a single user.

Prepare the area to be pigmented under suitable aseptic conditions.

Deposit the precise amount of product in an individual sterile and disposable container (cup).

At the end of the work, the container and remaining content will be eliminated, following the current regulations on waste disposal.

With a single-use disposable sterile needle, implant the product. The applicator personnel must use surgical gloves.

Precautions: A skin allergy test will always be carried out in advance for each of the products to be used, by a qualified professional. Contains nickel and/or chromium (VI). May cause allergic reactions.

Warnings: Never insert the needle inside the container.

Never use the product left over from the container, nor for the client's retouching.

Use sterile, single-use needles and containers.

Do not inhale or ingest the content.

Do not handle in container. If it is observed that the container has been tampered with, discard it.

Keep the container in a suitable storage place to preserve stability.

After performing micropigmentation, no manipulation should be performed on the implanted area.

After performing the pigmentation, make-up should not be used, nor should contact lenses be used, until at least 8 days after the pigmentation has elapsed.

After performing micropigmentation, no manipulation should be performed on the implanted area.

It is recommended not to sunbathe (artificial or natural) until 3 months after implantation.

Recommendations: Before starting treatment, the following observations should be considered: · The following are people of special care: diabetics, with immunological weakness, with healing problems, pregnant women, hemophiliacs and other pathologies.

· The application of the product is not recommended in people affected by: fungi, local skin infection, local dermatitis, bruises, sunburn, nevus, keloids, unstabilized scars, skin cancer, eczema, psoriasis, local inflammation, allergic reactions.

· The state of physical and mental health of the client must be adequate before carrying out the implantation.

· In case of poisoning or accidental ingestion, call the Toxicological Information Medical Service of your country.

See in the MSDS of the product contact in your country/region.

Implantation Duration: The pigmentation will vary according to the size to be made, never exceeding 4 hours of implantation.

Elimination of the implantation: If it is decided to eliminate the implantation, it must be done by a specialist doctor.

Specific storage conditions for the product: Keep in a cool, dry place. Do not leave exposed to the sun.
